## Breathable Building Envelope

The main building used VaproShield's WrapShield SA Self-Adhered Water Resistant Vapor Permeable Air Barrier Sheet Membrane (orange) behind a baffle-jointed metal panel system.

## Bold Architecture

To ensure a breathable building envelope the \$5.5 million renovation and addition of the 30 year old Lincoln Performing Arts Center chose VaproShield's WallShield (green) with VaproFlashing (black) as the weather resistive barrier.

Then to create a colorful, bold architectural statement Trespa® TS 110 open joint panels were installed as the primary cladding.

*VaproShield WallShield plus VaproFlashing Black ensured a breathable building envelope, installed behind Trespa TS 110 panels.*
